

Norske Landbrukstenester (NLT)

NLT ensures the operation of the farm when the farmer becomes ill or wants a holiday and leisure time. Our main work is to meet the need for qualified workforce and to ensure that we offer high quality farmers services.

Our companies are always up to date on information that may benefit all farmers.

NLT are the farmers own recruitment agency that provides qualified workers by acute illness, crises and holidays/leisure. The NLT-companies are owned by the farmers and are organized as cooperatives.

▪	number of NLT employees in the country	46 367
▪	turnover of NLT's in the country (€ 152 123 000)	1 452 208 850 NOK

What are we looking for?

We need workers who at least have ordinary agro-culture school (3 years). Some places it can be ok with specializing in dairy production, pig-breeding or meat production; herd-manager/stockbreeder/ and veterinary assistant. Also in the production of grass it can be ok to have some experience. We need workers for farms in Norway that produce milk and meat. Academically talented, practical and reliable workers who like to work alone with responsibility for the animals and farm, - as well as work in a team with farmer and others. When farmers have days off or holiday, the workers must be able to take care of the farm alone for some days.

In some cases we also recruits seasonal workers in vegetable cultivation, fruit cultivation, berry picking, harvest and ordinary farm work. In such positions, it is not always demands for trade education.

Some farms have "farm-managers" who have more or less the responsibility of the production, especially in pig-breeding. We have automatic feeding systems in the most of the pig-farms.

With more than 40 milk-cows, it is often automatic milk-robot (AMS) and feeding-system. Also in old traditional cowsheds with "with stall barns". It can also be practical and interesting if the workers have some technical or mechanical background.

We also have traditional farms with 20-30 cows + other cattle who have smaller production. These farmers often go together 2-5 farms to hire one worker together. Then the reliever works in a turn 10 days on and 4 days off at each farm. This is a very traditional way to solve the challenge for small farms so they can get some help and days off. For the workers this is a very varied, exciting, -also educational way of working, and you have several farmers to cooperate with.
